

## Now with ACT (Aggregated Client Times) for MET

---

### What is ACT?

ACT (**A**ggregated **C**lient **T**ime) covers Mechanical, Electrical and Trim replacement times for those items not included in Thatcham (TTS) data. These times have been data-mined by Inter-est by analysing hundreds of thousands of Authorised estimates, created by thousands of repairers over ten+ years. ACT is the best data because it is built on real information: “**your data**”.

### How will ACT appear in my estimates?

All ACT items will be Highlighted in **Blue** and will also be marked as Time Type **ACT** on the print out and Parts Details View. This will also be reflected in the Summaries.

### What is the benefit to me?

There will be less need for Opinion Time in your estimates as ACT times will now be available for most items. ACT for example will provide times for mechanical items (suspension, brakes, etc.) that are not available from a Thatcham only system.

### What about overlap?

ACT has full overlap logic and in all cases will overlap with other ACT times and TTS data where relevant.

### How do I use ACT?

**You don't have to do anything.** As you buy ancillary items such as radiators, door handles, mouldings etc. Inter-est Vision will automatically add in the ACT values, leaving you free to focus on those items - such as repairs - that need your opinion times.
